GENERAL VALVE DESCRIPTION

Industrial Valve Manufacturer

The 3E-series triple offset butterfly valves

are industrial fittings intended for full opening or closing flow. They may be also used for a rough flow control. They are designed for operation in very hard industrial conditions demanding safety, reliability and minimum maintenance like for example:

- power industry
- crude oil and natural gas
- refineries
- chemical and petrochemical industry
- metallurgy (and heavy industry in general)
- pulp and paper-making industry
- mining industry
- heat recovery, steam heating
- hydrocarbons processing
- fuel storage in aviation industry
- food industry

Basic properties

- triple offset disc design
- bidirectional design
- version with nitrided disc (valid for DN150 to DN500)
- stellited disc for larger sizes on the customers' demand
- used like shut-off or control fittings
- excellent tightness (tested according to international standards with high-pressure water or low-pressure air without visible leakage)
- easy operation, repairs and maintenance
- easy assembly in piping
- eccentric disc position in the body. Precise connection of the disc with the stem and pivot. Exact shaft and pivot bearing in the slide bushings.
- split sealed stem - bigger Kv
- standardized top flange according to ISO 5211 enabling mount various actuator types (electric, pneumatic, hydraulic)
- ATEX certified for explosive atmosphere
- option: TA-Luft sealed valve with special shaft gland

Type designation

3 5 L 4 B 150

Nominal size (DN)

Body design

- B - AFER W body type with th holes reared
- T - LUG body type with tapped holes
- F - double-flange body type with through holes

Disc material

- 7 - stainless steel 1.4539 (Uranus B6, AISI 904L)
- 4 - stainless steel 1.4408 (A351 CF8M) nitridated / stainless steel 1.4027 (Ca40) nitridated
- 4s - stainless steel 1.4408 (A351 CF8M) + stellite nitridated / stainless steel 1.4027 (CA40) + stellite nitridated

Seat material

- L - lamellar - stainless steel 1.4401 (AISI 316) + graphite / stainless steel 1.4462 + graphite

Body material

- 7 - stainless steel 1.4539 (Uranus B6, AISI 904L)
- 6 - low carbon steel 1.1156 (A352 LCC) / 1.0566
- 6s - low carbon steel 1.1156 (A352 LCC) / 1.0566 + stellite
- 5 - carbon steel 1.0625 (A216 WCB) / 1.4025
- 5s - carbon steel 1.0625 (A216 WCB) / 1.4025 + stellite
- 4 - stainless steel 1.4408 (A351 CF8M) / 1.4401 (AISI 316)
- 4s - stainless steel 1.4408 (A351 CF8M) / 1.4401 (AISI 316) + stellite

Series designation

- Series 3E

VALVE MODELS

Graphite stem stuffing box

Advantages of triple offset valves

- two-piece stem (wafer/lug types DN150 to DN500)
- large flow zone
- lower pressure loss, higher Kv
- during opening and shutting the valve the **sealing ring does not rub against the seat**. They come to contact only after the valve is entirely shut.
- the seal guarantees perfect stem tightness (graphite, PTFE cord or from other material / on demand **TA-Luft** certification)
- actuator connection can be modified by means of a bracket or the stem can be extended if connected to special actuator types

Advantages of triple offset valves

- ABO valve production facilities are certified in accordance with ISO 9001:2015 (14001, 45001)
- tightness test procedures according to standards EN 12266-1, ISO 5208, ANSI/FCI 70-2,
- production in accordance with the Pressure Equipment Directive 2014/68/EU (Module H)
- the possibility of issuing inspection certificate 3.1, 3.2
- all the actuators are adjusted and tested while assembled
- all the certificates can be downloaded at **www.abovalve.com**

The stem seal with TA-LUFT certification for perfect tightness of pollutants into the ambient air (upon request)

DESIGN ADVANTAGES

Industrial Valve Manufacturer

Triple eccentricity

1. Stem axis offset off the pipeline main axis.
 2. Stem axis offset off the seal area.
 3. Seat cone axis is off the pipeline main axis
- the triple eccentricity design contributes to very effective principle of Metal-Metal sealing, which is mainly intended for sealing high parameters of both pressures and temperatures. Properly designed geometry eliminates friction between the seating surfaces of the sealing TRIM, which helps the long lifetime of the valve. The main sealing node consists of a high-precision sealing pair with a special geometry of the offset cone.

DESIGN ADVANTAGES

1. Interchangeable actuators

- standardized top flange according to ISO 5211 enables to mount manual control or actuators.
- High valve neck enables to use insulation and to provide thermal protection of handling equipment on the ISO flange (protection of actuators).

2. Graphite rings gland

- the gland system is composed from a set of graphite sealing rings preventing leaking around the stem.
- Excellent thermal resistance and very good sealing properties are the features of the material used for the gland set. Optimum pressure of the gland set is created by means of the gland flange bolts. For various media operation pressures optimal gland pressures can be generated to ensure correct function and to prevent needless control torque increase.

3. Lamellar seal

- the sealing ring is composed of stainless and graphite layers. This set is able to resist high temperatures and provides excellent resistance of the sealing element even during considerable media temperature and pressure fluctuations

4. Split stem

- the split stem design considerably decreases pressure loss (achieving higher Kv values)

5. Spiral seal

- spiral stainless steel strap with soft graphite fill provides perfect sealing even at high fluctuations of temperature and pressure in pipeline. Excellent sealing features are guaranteed both at high and at low temperatures, i.e. while materials both stretch and shrink.

6. Teflon seat

- the valve is designed to minimize friction between the seat and the lamellaring. Suitable surface treatment of the parts (nitriding) contributes to that.

VALVE ACTUATION

Industrial Valve Manufacturer

All the ABO valves can be equipped with worm drives, pneumatic and electric actuators. The upper flange according to the ISO 5211 international standard enables to directly install a manual handle or an actuator. Thus compatibility between the valve and the actuator is guaranteed.

Worm gear with handwheel

Manual gearbox housing is made from cast iron with suitable surface treatment and protection degree class IP 67. Self-locking design of the worm gear enables both to adjust basic positions open/shut and to control (throttle) media flow. The worm gearbox is simply actuated by means of a handwheel of a suitable diameter. End-limit positions of the worm gearbox are set by means of stop screws. The gearbox can be equipped with a lockable system secured by a padlock. Another way how to handle worm gearbox is using a chain. The worm gearbox as well as the hand lever can be completed with end-limit position sensors.

The stated weight is approximate

Actuators

Pneumatic actuators

Pneumatic actuators ABO Series 95 can be assembled to valves in two options: single-acting or double-acting.

Pneumatic actuators

Electric actuators ABO Series 97 are designed quarter-turn. Electric actuators can be installed on ABO valves for voltages of 24 V, 230 V or 400 V.

Special actuators types

Valves are equipped with special actuator types from major world suppliers (Auma, Regada, Valpes, etc.).

Triple eccentricity

1. Stem axis offset off the pipeline main axis.
2. Stem axis offset off the seal area.
3. Seat cone axis is off the pipeline main axis.

- the triple eccentricity design contributes to very effective principle of Metal-Metal sealing, which is mainly intended for sealing high parameters of both pressures and temperatures. Properly designed geometry eliminates friction between the seating surfaces of the sealing TRIM, which helps the long lifetime of the valve. The main sealing node consists of a high-precision sealing pair with a special geometry of the offset cone.

10 / AB0 Valve Czech

DESIGN ADVANTAGES

1. Interchangeable actuators

- standardized upper flange according to ISO 5211 enables to mount manual control or actuators. High valve neck enables to use insulation and to provide thermal protection of handling equipment on the ISO flange (protection of actuators).

2. Shaft bearings

- precise production of sliding bushes, including the nickel-plated surface treatment, ensures very precise guidance and position of the valve control shaft

3. Seat pressure ring

- the pressure ring ensures the correct position of the seat in the body

4. Lamellar seal

- the sealing ring ensuring the tightness of the valve itself is made of individual layers of stainless steel, which are interlaced with a graphite layer

5. Disc sealing ring

- a sealing ring combined with a spiral seal, which allows its precise setting toward to the disc and ensures a perfect tightness. Thanks to this design, the laminated sealing ring can be easily replaced at any time.

6. Replaceable seat

- exchangeable seat in the body can be made of a wide range of materials, which with their mechanical properties help to long lifespan (abrasion resistance)

The stated weight is approximate.

Actuators

Pneumatic actuators ABO Series 95 can be assembled to valves in two options: single-acting or double-acting. **Electric actuators ABO Series 97** are designed quarter-turn. Electric actuators can be installed on ABO valves for voltages of 24 V, 230 V or 400 V. Valves can be equipped with **special actuator types** from major world suppliers (Auma, Regada, Valpes, etc.).

Operating torques (Nm) vs. working pressure (bar)

DN	80	100	125	150	200	250	300	350	400
NPS	3"	4"	5"	6"	8"	10"	12"	14"	16"
p_{MAX} 6 bar	28	65	45	120	315	502	789	1195	1687
p_{MAX} 10 bar	35	65	45	140	345	585	875	1370	1810
p_{MAX} 16 bar	42	70	60	160	451	787	1098	1469	2355
p_{MAX} 25 bar	70	85	85	220	520	876	1314	1963	2927
p_{MAX} 40 bar	91	125	120	400	713	1251	1918	1689	4310
p_{MAX} 50 bar	105	150	140	400	960	1720	2630	3870	5800

Operating torques are mentioned without safety factor

Closing torques

DN	80	100	125	150	200	250	300	350	400
NPS	3"	4"	5"	6"	8"	10"	12"	14"	16"
Closing torque (water)	84	140	175	400	650	950	1300	2640	4160
Closing torque (air)	84	140	175	400	650	950	1300	2640	4160
Max. shaft torque (35Lxx)	183	327	327	635	1182	2184	3367	7086	11412
Max. shaft torque (34Lxx)	183	327	327	476	1182	2184	3367	7286	11412

Operating torques are mentioned without safety factor

NOTES

Industrial Valve Manufacturer

A large grid of graph paper for taking notes, consisting of 20 columns and 30 rows of small squares.
